Gearbox allows you to record parts used against a Service, Repair or Tyre (Work Order). Parts can be automatically added to a Service by setting up the relevant Parts on the Vehicle Parts screen.

On a Service, Repair or Tyre use the **Add Part** button to add new Parts. Existing Parts may be edited by clicking on the row. Parts may also be deleted from a Work Order.

While the Work Order remains open, Gearbox will mark the parts as **Allocated**. Allocated Parts will reduce the **Total Stock** count. Once the Work Order is closed, Gearbox will move the parts from Allocated to **Used**.
