TELETRAC NAVMAN

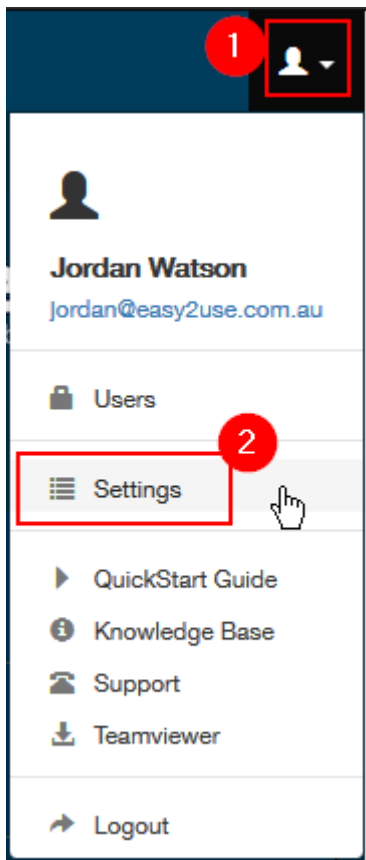

Gearbox integrates with Teletrac Navman to collect vehicle odometer and hour meter readings on a nightly basis. The data is uploaded into Gearbox as a Mileage/Odometer reading.

To connect Gearbox to Teletrac Navman, Gearbox requires a specific API login for your Director account that is only provided upon your request to Teletrac Navman.

The display name in Navman must match the registration or fleet number in Gearbox for the vehicles to be matched.

Once you've received the login credentials from Navman, open Gearbox and in the top right-hand corner, click your user icon (1) and select Settings (2) from the drop-down:

On the left-hand side of the screen, select Integrations (1):

Gearbox Maintenance ▾ Employees ▾ Compliance ▾

Gearbox
simply better fleet software

This will open a new page, scroll down this page until you find the Navman logo. Enter your

username (1), password (2), check the Integrate Navman checkbox (3) and finally, click Save (4):

The screenshot shows the 'Navman Telematics' configuration page. On the left is the NAVMAN logo. The main content area includes a checkbox for 'Automatically import odometer readings from Navman overnight' (1), a 'Username' field containing 'gearbox.navman' (1), a 'Password' field with masked characters (2), and an 'Integrate Navman' checkbox (3). A 'Please Note' section explains that the connection uses Gearbox fleet numbers or registration numbers. At the bottom right are 'Connect Vehicles' and 'Save' buttons (4).

Once the details have been successfully saved, click the blue Connect Vehicles button (1):

This screenshot shows the same 'Navman Telematics' form after the details have been saved. The 'Connect Vehicles' button (1) is highlighted with a red box. The 'Integrate Navman' checkbox is now checked. The 'Save' button is now green.

You will receive an email shortly after with the results of the connect vehicles job.

Error/Status codes:

- No login details retrieved, issue with DoLogin[API]

Indicates there is an issue logging into the API using the provided credentials, contact Navman Support to check the API credentials have been configured correctly.

- No active vehicle found in Gearbox

Indicates that a vehicle that exists in Navman does not exist in Gearbox. To resolve, add the vehicle from Navman into Gearbox.
